AGRICULTURAL PRICES, 1959 ANNUAL SUMMARY

Average prices received by farmers, by States and U. S. monthly and season 1959; U. S. monthly and season 1954-58

This is the first of a series of annual publications showing a compilation of estimates of prices received and prices paid by farmers. Formerly, similar data were included in Crops and Markets, a report last published in 1957. This report assembles in a single publication the latest available monthly and annual price estimates shown currently in Agricultural Prices and in the various annual publications showing Production, Use, and Value.

As collected by the U. S. Department of Agriculture, prices received by farmers relate to the average prices they receive for their products--generally at the point of first sale. Points of first sale by farmers may range all the way from sales on a graded, packed, and delivered basis to bulk sales at the farm. The average price concept is that of a price which if multiplied by the total quantity of the commodity sold, would equal the total sum received by all farmers for that commodity. Since in general these estimates are designed to represent the average price received for all sales of a commodity on an "as sold" basis, they do not measure the price of a specific grade, kind, or variety at a common point of sale.

Apples and citrus fruits are exceptions to the "as sold" concept. The apple price series relates to the equivalent packinghouse-door returns for Washington and Oregon, to bulk fruit at first delivery point for California, and to the price "as sold" for other States. Citrus prices relate to equivalent returns at a specific point of sale. The citrus series is omitted from this publication. Revised monthly equivalent returns for the 1958-59 crop will be published as a supplement to the October 1960 issue of Agricultural Prices.

Monthly prices. In general, prices for most of the commodities are collected over a period of a week centered on the 15th of the month, and these prices are used to represent average prices received for sales of the commodity during the month. For some commodities, these monthly prices as published currently are reviewed at the end of the season and revised, if necessary, to take into account sales for the entire month. Notable among this group are meat animals, milkfat in cream, and seeds. For the following commodities the current estimate is defined as a monthly average: Apples, peaches, pears, citrus, potatoes, tobacco, milk sold at wholesale to plants and dealers, broilers, and wool. At the State level prices are estimated only for months in which 0.5 percent or more of annual sales of the commodity are marketed.

Season and annual average prices. State season and annual average prices are computed by weighting monthly prices by the estimated proportion of the marketing season or calendar year sales made each month. Regional and U. S. average prices are obtained by weighting State prices by estimated quantities sold in each State. Marketing seasons for each commodity are shown on Pages 145-146.

Average Prices Paid by Farmers

Estimates of prices paid by farmers, as prepared and published by the Department of Agriculture, reflect the average unit cost of commodities and services commonly bought by farmers. Data are collected on a representative selection of items which includes most of the important element of farmers' expenditure for living and farm production. Retail price data are acquired from merchants serving rural areas, primarily by use of a mailed inquiry. For each commodity, respondents are requested to report prices for the size, grade, and quality most commonly sold to farmers. In general, definite specifications are laid down only for those items for which specifications are an important factor in price. Prices for lumber for example, vary to some extent with length of cut, and substantially, with specie and grade. For this reason, prices are requested for a specified dimension, grade, and species of lumber. Similarly, prices are collected for dairy feeds of different protein contents. On the other hand, quotations of retail prices of rice and of many other items are not stratified by kind, grade, or variety, when such factors do not cause sharp differences in prices.

Prices reported are mostly cash quotations although when sales are customarily made on a credit basis it is probable that credit prices are reported in many instances. Variations in specifications of a given product bought by farmers are reflected in the reported prices. Prices of topcoats for example, usually are higher in the North than in the South reflecting the relatively heavier clothing ordinarily worn in cooler climates. Similarly, prices paid by farmers for many items of clothing normally are higher in winter than summer.

Price Indexes

A description of the Index of Prices Received by Farmers, and the Index of Prices Paid by Farmers including Interest, Taxes, and Farm Wage Rates is contained in the following:

Agricultural Handbook No. 118, Major Statistical Series of the U. S. Department of Agriculture, Volume 1, Agricultural Prices and Parity, by B. R. Stauber and R. H. Moats.

Agricultural Economics Research, Vol. XI, No. 2 and 3, April-July 1959, the January 1959 Revision of the Prices Indexes, by B. R. Stauber, R. F. Hale, and B. S. Peterson.

^{1/} United States annual averages for 1954-57 and the State averages for 1959 represent the simple average of monthly prices. For 1958 and 1959 the United States annual averages are computed by weighting State annual prices by the number of milk cows on farms the following January 1.
